SHINE is an opportunity for high school students to engage in immersive cutting-edge research with a mentor. SHINE empowers students to become confident and capable contributors to high-impact research. SHINE will be on campus, in person in summer 2023.

SHINE students apply to join a USC Viterbi professor’s research team for seven weeks to discover how engineering addresses pressing problems in fields ranging from biomedicine to robotics to aerospace and much more. Each student works with a mentor (Ph.D. student or post-doctoral researcher) dedicated to training that student in experimental lab work or computational research, or both on authentic projects in order to learn through experience. SHINE is nothing like summer school! It builds a close-knit community in weekly activities with the entire cohort to introduce the practices and ethics of creating new knowledge, social and intellectual networking, college prep tips, and extensive experience in scientific communication. Visit the website for project descriptions and past project posters. Must be available on campus for 7 weeks.

*Students need an unweighted GPA of >3.4, academic recommendations & curiosity.*

**INFO SESSIONS DETAILS**
December 6 from 5:00 pm - 6:00 pm
